

**AMENDMENTS TO THE ABSTRACT OF THE DISCLOSURE**

Please enter the following Abstract of the Disclosure in the record:

A device for spraying spray products in a dishwasher enables the dishes to be impinged upon with dishwashing fluid in an efficient manner and to avoid wear and tear caused by moving parts and to provide trouble-free operation. The spraying device sprays dishwashing fluid into the inside of the washing container and includes at least one spray channel that guides at least one dishwashing liquid and is integrated into the bottom, top and/or wall area of the washing container, whereby openings which are oriented toward the interior of the washing container are provided on one side and enable the dishwashing fluid to pass therethrough. An improved more homogeneous distribution of dishwashing fluid is provided and it is possible to dispense with moving parts, such as spray arms for the distribution of dishwashing fluid, leading to greater freedom in terms of washing container and wash basket design.
